Subject: Portland Harbor Clean Up

Please clean up the Willamette River. Not just a small portion of the toxic waste, but all of it. Our descendants will have to live with our choices and if we just go for the cheapest easiest plan and leave most of the PCB,s, dioxins, pesticides, metals, herbicides, etc. behind how will we look our descendants in the eye? The habitat needs to be restored for the fish, birds, other wildlife and the people who live by and use the river. The fish needs to be safe to eat in any quantity.

Choose proposal H.

Hire locally.

The polluters must pay for the clean up. Instead of wasting money fighting taking responsibility for their actions the polluters would be better off getting started and spending the money on restoration of the river.

The contaminant from dredging should be removed to a toxic waste site, not placed next to the river.

"Monitored Natural Recovery" is a joke and anyone should be embarrassed to propose it. Do nothing is not an option and will not be accepted.

Do your job and protect the environment and people of Oregon. Too many companies have made a profit at our expense. Make them clean up after themselves.

Sincerely,

(b) (6)
